

Progression in ICT and Computing

Intent

Our computing curriculum will empower pupils to become computational thinkers, the knowledge and skills that we believe will enable them to make sense of and contribute to their world. Increasingly that requires the use and understanding of computers and different technologies.

We teach our learners about the advantages of computing, but learners will also benefit from developing some essential ICT skills, which will enable them to interact more meaningfully and securely with computers.

Developing computational thinking in the students from an early age will help them to understand and contribute to the community they will live in as adults. Our teachers will ensure that our teaching is focused on the learners' development and not on the technology.

This program will develop our students understanding of algorithms; how the algorithms are implemented as programs on digital devices; and that programs execute by following precise and unambiguous instructions; create and debug simple programs; improve computer literacy and how to use the internet securely.

Computer Science	Information Technology	Digital Literacy
-------------------------	-------------------------------	-------------------------

Teaching & Learning:

A high-quality computing education equips pupils to use computational thinking and deepens the links with mathematics, science and design and technology, and provides insights into both natural and artificial systems. The core of computing is computer science, in which pupils are taught the principles of information and computation, how digital systems work and how to put this knowledge to use through programming.

ICT and Computing: strands of learning

Computer Science

- can understand and apply the fundamental principles and concepts of computer science, including abstraction, logic, algorithms and data representation.
- can analyse problems in computational terms, and have repeated practical experience of writing computer programs in order to solve such problems.

Information Technology

- can evaluate and apply information technology, including new or unfamiliar technologies, analytically to solve problems

Digital Literacy

- are responsible, competent, confident and creative users of information and communication technology. (Digital literacy)

Progression in ICT and Computing

Concepts to be taught and explored in each strand:

KS 1

- understand what algorithms are, how they are implemented as programs on digital devices, and that programs execute by following precise and unambiguous instructions
- create and debug simple programs
- use logical reasoning to predict the behaviour of simple programs
- use technology purposefully to create, organise, store, manipulate and retrieve digital content
- recognise common uses of information technology beyond school
- use technology safely and respectfully, keeping personal information private; identify where to go for help and support when they have concerns about content or contact on the internet or other online technologies

KS 2

- design, write and debug programs that accomplish specific goals, including controlling or simulating physical systems; solve problems by decomposing them into smaller parts
- use sequence, selection, and repetition in programs; work with variables and various forms of input and output
- use logical reasoning to explain how some simple algorithms work and to detect and correct errors in algorithms and programs
- understand computer networks, including the internet; how they can provide multiple services, such as the World Wide Web, and the opportunities they offer for communication and collaboration
- use search technologies effectively, appreciate how results are selected and ranked, and be discerning in evaluating digital content
- select, use and combine a variety of software (including internet services) on a range of digital devices to design and create a range of programs, systems and content that accomplish given goals, including collecting, analysing, evaluating and presenting data and information
- use technology safely, respectfully and responsibly; recognise acceptable/unacceptable behaviour; identify a range of ways to report concerns about content and contact

Assessment and Recording

Pupils progress will be recorded using an assessment tracker which will serve as a live document. The assessment tracker covers all criteria within the objectives.

Pupils can see and track their progress every lesson and where intervention is needed pupils can assist in ensuring continuous progress. Many skills are repeated in computing and ICT and therefore improvement in certain.

Progression in ICT and Computing

Aims	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6
Computer Science	Objectives					
	<p>Understand what algorithms are; how they are implemented as programs on digital devices; and that programs execute by following precise and unambiguous instructions.</p>		<p>Design, write and debug programs that accomplish specific goals, including controlling or simulating physical systems; solve problems by decomposing them into smaller parts.</p>			
<p><i>Children understand that an algorithm is a set of instructions used to solve a problem or achieve an objective.</i></p> <p><i>They know that an algorithm written for a computer is called a program.</i></p>	<p><i>Children can explain that an algorithm is a set of instructions to complete a task.</i></p> <p><i>When designing simple programs, children show an awareness of the need to be precise with their algorithms so that they can be successfully converted into code.</i></p>	<p><i>Children can turn a simple real-life situation into an algorithm for a program by deconstructing it into manageable parts. Their design shows that they are thinking of the desired task and how this translates into code.</i></p> <p><i>Children can identify an error within their program that prevents it following the desired algorithm and then fix it.</i></p>	<p><i>When turning a real-life situation into an algorithm, the children's design shows that they are thinking of the required task and how to accomplish this in code using coding structures for selection and repetition.</i></p> <p><i>Children make more intuitive attempts to debug their own programs.</i></p>	<p><i>Children may attempt to turn more complex real-life situations into algorithms for a program by deconstructing it into manageable parts.</i></p> <p><i>Children are able to test and debug their programs as they go and can use logical methods to identify the approximate cause of any bug but may need some support identifying the specific line of code.</i></p>	<p><i>Children are able to turn a more complex programming task into an algorithm by identifying the important aspects of the task (abstraction) and then decomposing them in a logical way using their knowledge of possible coding structures and applying skills from previous programs.</i></p> <p><i>Children test and debug their program as they go and use logical methods to identify the cause of bugs, demonstrating a systematic approach to try to identify a particular line of code causing a problem.</i></p>	

Progression in ICT and Computing

	Create and debug simple programs.		Use sequence, selection and repetition in programs; work with variables and various forms of input and output.			
Computer Science	<p>Children can work out what is wrong with a simple algorithm when the steps are out of order, e.g. The Wrong Sandwich in Purple Mash and can write their own simple algorithm, e.g. Colouring in a Bird activity.</p> <p>Children know that an unexpected outcome is due to the code they have created and can make logical attempts to fix the code, e.g. Bubbles activity in 2Code.</p>	<p>Children can create a simple program that achieves a specific purpose.</p> <p>They can also identify and correct some errors, e.g. Debug Challenges: Chimp. Children's program designs display a growing awareness of the need for logical, programmable steps.</p>	<p>Children demonstrate the ability to design and code a program that follows a simple sequence.</p> <p>They experiment with timers to achieve repetition effects in their programs.</p> <p>Children are beginning to understand the difference in the effect of using a timer command rather than a repeat command when creating repetition effects.</p> <p>Children understand how variables can be used to store information while a program is executing</p>	<p>Children's use of timers to achieve repetition effects are becoming more logical and are integrated into their program designs.</p> <p>They understand 'if statements' for selection and attempt to combine these with other coding structures including variables to achieve the effects that they design in their programs.</p> <p>As well as understanding how variables can be used to store information while a program is executing, they are able to use and manipulate the value of variables.</p> <p>Children can make use of user inputs and outputs such as 'print to screen'. e.g. 2Code.</p>	<p>Children can translate algorithms that include sequence, selection and repetition into code with increasing ease and their own designs show that they are thinking of how to accomplish the set task in code utilising such structures.</p> <p>They are combining sequence, selection and repetition with other coding structures to achieve their algorithm design.</p>	<p>Children translate algorithms that include sequence, selection and repetition into code and their own designs show that they are thinking of how to accomplish the set task in code utilising such structures, including nesting structures within each other.</p> <p>Coding displays an improving understanding of variables in coding, outputs such as sound and movement, inputs from the user of the program such as button clicks and the value of functions.</p>

Progression in ICT and Computing

Computer Science	Use logical reasoning to predict the behaviour of simple programs.		Use logical reasoning to explain how some simple algorithms work and to detect and correct errors in algorithms and programs.			
	<p>When looking at a program, children can read code one line at a time and make good attempts to envision the bigger picture of the overall effect of the program.</p> <p>Children can, for example, interpret where the turtle in 2Go challenges will end up at the end of the program.</p>	<p>Children can identify the parts of a program that respond to specific events and initiate specific actions. For example, they can write a cause and effect sentence of what will happen in a program.</p>	<p>Children's designs for their programs show that they are thinking of the structure of a program in logical, achievable steps and absorbing some new knowledge of coding structures. For example, 'if' statements, repetition and variables.</p> <p>They make good attempts to 'step through' more complex code in order to identify errors in algorithms and can correct this. e.g. traffic light algorithm in 2Code.</p> <p>In programs such as Logo, they can 'read' programs with several steps and predict the outcome accurately.</p>	<p>Children's designs for their programs show that they are thinking of the structure of a program in logical, achievable steps and absorbing some new knowledge of coding structures. For example, 'if' statements, repetition and variables.</p> <p>They can trace code and use step-through methods to identify errors in code and make logical attempts to correct this. e.g. traffic light algorithm in 2Code. In programs such as Logo, they can 'read' programs with several steps and predict the outcome accurately.</p>	<p>When children code, they are beginning to think about their code structure in terms of the ability to debug and interpret the code later, e.g. the use of tabs to organise code and the <u>naming of variables</u>.</p>	<p>Children are able to interpret a program in parts and can make logical attempts to put the separate parts of a complex algorithm together to explain the <u>program as a whole</u>.</p>

Progression in ICT and Computing

Computer Science	<p>Understand computer networks, including the internet; how they can provide multiple services, such as the World Wide Web, and the opportunities they offer for communication and collaboration.</p>			
	<p>Children can list a range of ways that the internet can be used to provide different methods of communication.</p> <p>They can use some of these methods of communication, e.g. being able to open, respond to and attach files to emails using <u>Email</u>.</p> <p>They can describe appropriate email conventions when communicating in this way.</p>	<p>Children recognise the main component parts of hardware which allow computers to join and form a network.</p> <p>Their ability to understand the online safety implications associated with the ways the internet can be used to provide different methods of communication is improving.</p>	<p>Children understand the value of computer networks but are also aware of the main dangers.</p> <p>They recognise what personal information is and can explain how this can be kept safe.</p> <p>Children can select the most appropriate form of online communications contingent on audience and digital content, e.g. <u>Blog</u>, <u>Email</u>, <u>Display Boards</u>.</p>	<p>Children understand and can explain in some depth the difference between the internet and the World Wide Web.</p> <p>Children know what a WAN and LAN are and can describe how they access the <u>internet in school</u>.</p>

Progression in ICT and Computing

Aims	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6
Information Technology	Objectives					
	<p>Use technology purposefully to create, organise, store, manipulate and retrieve digital content.</p>		<p>Use search technologies effectively, appreciate how results are selected and ranked, and be discerning in evaluating digital</p>			
	<p><i>Use technology purposefully to create, organise, store, manipulate and retrieve digital content.</i></p>	<p><i>Children demonstrate an ability to organise data using, for example, a database such as 2Investigate and can retrieve specific data for conducting simple searches.</i></p> <p><i>Children are able to edit more complex digital data such as music compositions within 2Sequence. Children are confident when creating, naming, saving and retrieving content.</i></p> <p><i>Children use a range of media in their digital content including photos, text and sound.</i></p>	<p><i>Children can carry out simple searches to retrieve digital content.</i></p> <p><i>They understand that to do this, they are connecting to the internet and using a search engine such as Purple Mash search or internet-wide search engines.</i></p>	<p><i>Children understand the function, features and layout of a search engine.</i></p> <p><i>They can appraise selected webpages for credibility and information at a basic level.</i></p>	<p><i>Children search with greater complexity for digital content when using a search engine.</i></p> <p><i>They are able to explain in some detail how credible a webpage is and the information it contains.</i></p>	<p><i>Children readily apply filters when searching for digital content.</i></p> <p><i>They are able to explain in detail how credible a webpage is and the information it contains.</i></p> <p><i>They compare a range of digital content sources and are able to rate them in terms of content quality and accuracy.</i></p> <p><i>Children use critical thinking skills in everyday use of online communication.</i></p>

Progression in ICT and Computing

Information Technology

Select, use and combine a variety of software (including internet services) on a range of digital devices to design and create a range of programs, systems and content that accomplish given goals, including collecting, analysing, evaluating and presenting data and information.

Children can collect, analyse, evaluate and present data and information using a selection of software, e.g. using a branching database (2Question), using software such as 2Graph.

Children can consider what software is most appropriate for a given task.

They can create purposeful content to attach to emails, e.g. 2Respond.

Children are able to make improvements to digital solutions based on feedback.

Children make informed software choices when presenting information and data.

They create linked content using a range of software such as 2Connect and 2Publish+.

Children share digital content within their community, i.e. using Virtual Display Boards.

Children are able to make appropriate improvements to digital solutions based on feedback received and can confidently comment on the success of the solution, e.g. creating their own program to meet a design brief using 2Code.

They objectively review solutions from others.

Children are able to collaboratively create content and solutions using digital features within software such as collaborative mode.

They are able to use several ways of sharing digital content, i.e. 2Blog, Display Boards and 2Email.

Children make clear connections to the audience when designing and creating digital content.

The children design and create their own blogs to become a content creator on the internet, e.g. 2Blog.

They are able to use criteria to evaluate the quality of digital solutions and are able to identify improvements, making some refinements.

Progression in ICT and Computing

Aims	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6
Digital Literacy	Objectives					
	<p>Recognise common uses of information technology beyond school.</p>					
<p><i>Children understand what is meant by technology and can identify a variety of examples both in and out of school.</i></p>		<p><i>Children can effectively retrieve relevant, purposeful digital content using a search engine.</i></p>				
<p><i>They can make a distinction between objects that use modern technology and those that do not e.g. a microwave vs. a chair.</i></p>		<p><i>They can apply their learning of effective searching beyond the classroom.</i></p>				
		<p><i>They can share this knowledge, e.g. <u>2Publish example template.</u></i></p>				
		<p><i>Children make links between technology they see around them, coding and multimedia work they do in school e.g. <u>animations, interactive code and programs.</u></i></p>				

Progression in ICT and Computing

Digital Literacy	<p>Use technology safely and respectfully, keeping personal information private; identify where to go for help and support when they have concerns about content or contact on the internet or other online technologies.</p>		<p>Use technology safely, respectfully and responsibly; recognise acceptable/ unacceptable behaviour; identify a range of ways to report concern about content and contact.</p>			
	<p>Children understand the importance of keeping information, such as their usernames and passwords, private and actively demonstrate this in lessons.</p> <p>Children take ownership of their work and save this in their own private space such as their My Work folder on Purple Mash.</p>	<p>Children know the implications of inappropriate online searches.</p> <p>Children begin to understand how things are shared electronically such as posting work to the Purple Mash display board.</p> <p>They develop an understanding of using email safely by using <u>2Respond</u> activities on Purple Mash and know ways of reporting inappropriate behaviours and content to a trusted adult.</p>	<p>Children demonstrate the importance of having a secure password and not sharing this with anyone else.</p> <p>Furthermore, children can explain the negative implications of failure to keep passwords safe and secure.</p> <p>They understand the importance of staying safe and the importance of their conduct when using familiar communication tools such as <u>2Email</u> in Purple Mash.</p> <p>They know more than one way to report unacceptable content and contact.</p>	<p>Children can explore key concepts relating to online safety using concept mapping such as <u>2Connect</u>.</p> <p>They can help others to understand the importance of online safety.</p> <p>Children know a range of ways of reporting inappropriate content and contact.</p>	<p>Children have a secure knowledge of common online safety rules and can apply this by demonstrating the safe and respectful use of a few different technologies and <u>online services</u>.</p> <p>Children implicitly relate appropriate online behaviour to their right to personal privacy and mental wellbeing of themselves and others.</p>	<p>Children demonstrate the safe and respectful use of a range of different technologies and online services.</p> <p>They identify more discreet inappropriate behaviours through developing critical thinking, e.g. <u>2Respond</u> activities.</p> <p>They recognise the value in preserving their privacy when online for their own and other people's safety.</p>
